

Regain speech & language after stroke or brain injury

Independent therapy practice on your computer at *home* or in the *clinic*.

Wilson Talley working on Bungalow programs.

“*Bungalow Software is great. My husband spends several hours a day working on it. His progress was quite evident in the therapist’s follow-up*”

provided therapy can end due to lack of progress. Bungalow’s unlimited practice enables steady progress. That can mean more insurance-provided therapy.

Help when therapy ends

Most insurance-provided therapy eventually ends. Bungalow Software provides home carry-over practice after therapy. This maintains the gains made in therapy and helps the patient recover further.

20 computer programs for

- Aphasia (word retrieval)
- Apraxia (articulation)
- Reading
- Writing
- Auditory Comprehension
- Memory & Reasoning

Thousands have used it since 1995

Thousands of stroke & brain-injury survivors have used *Bungalow Software’s* therapy programs have since 1995. It’s never too late (or too early) for therapy. They have helped patients up to 25 years after a stroke. All programs have a money-back guarantee.

Easy for anyone to use *Independently*

Speech therapists created these therapy programs for adults with brain injuries. Survivors use them on their own personal computer (PC) at home whenever they like. Anyone can use them *independently*. No computer experience needed. Most can be used with just one or two keys on the keyboard.

Boosts Self Esteem

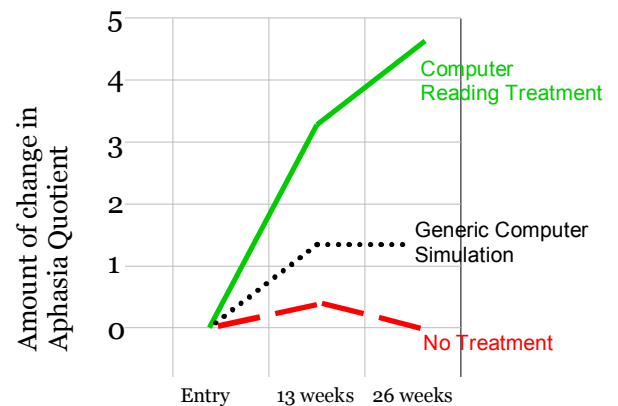

Patients are often too embarrassed and frustrated to practice their speech and language in front of people (even a therapist). Survivors can work on Bungalow Software programs *independently*. This makes therapy easier and boosts their self esteem.

Help during therapy

Bungalow Software can’t replace a speech therapist, but it gives you extra practice conveniently and economically. And Bungalow can help you get more therapy. Insurance-

Software is Clinically proven

The graph below, from a published clinical study* shows that patients recovered much faster with computer aphasia therapy.

Full details of this study and others, are on the Bungalow website:
